

Steyn Capital SNN QI Hedge Fund

Minimum Disclosure Document (MDD) as required by Board Notice 92

30 April 2022

Portfolio Profile

The Steyn Capital SNN QI Hedge Fund is a value orientated long/short portfolio investing in South African equities. The portfolio follows a bottom-up stock selection approach. The portfolio is currently open to new investment.

The following investment restrictions are applied in the portfolio:

- Gross exposure is limited to 200% of net assets
- Net exposure is limited to between 25% and 100% of net assets
- Individual long positions are limited to 20% of net assets
- Individual short positions are limited to 7.5% of net assets
- Net industry concentration (as measured by sub-sector) is limited to 25% of net assets

Objectives & Strategy

The fund's primary objective is achieving absolute rates of return over the long term, while minimizing the risk of capital impairment. The investment strategy is to maximize investor capital by buying securities with trading values materially lower than their intrinsic values, and by selling short securities with trading values materially higher than their intrinsic values.

Commentary by Investment Manager

Our portfolio returned 2.34% net for the month of April 2022 and 8.22% for the year to date. The biggest contributor to portfolio performance in the month was a long position in a Resource company, which is benefitting from current windfall profits given spot commodity prices. We estimate that at the current prices which have persisted for most of this year, the company is on track to generate 80% of its market cap in free cash this year, and we expect much of that to be returned to shareholders. Other contributors included a cash-generating Packaging and Print business, trading at a deep discount to its fair value, which traded up strongly following an announced acquisition and a preference share investment which traded up on no fundamental news.

At month end, we held 93% of our capital in 36 long positions and -23% in 21 short positions, for a net market exposure of 70%. The portfolio currently has a beta adjusted market exposure of approximately 34%.

Portfolio Asset Allocation Report

Equity Exposure	Current	Q1 2022	Change	Sector Allocation	Net	Long	Short
Long equity exposure	93%	92%	+1%	Financials	14%	24%	-10%
Short equity exposure	-23%	-22%	-1%	Resources	11%	11%	-%
Gross equity exposure	116%	114%	+2%	Industrials	45%	58%	-13%
Net equity exposure	70%	70%	-%	Total	70%	93%	-23%
Beta adjusted net exposure	34%	29%	+5%

Definitions

Leverage Risk: Applies when a fund borrows additional funds, trades on margin or performs short sale trades to amplify investment decisions. This means that the volatility of a hedge fund can be many times that of the underlying investments. Our portfolio is exposed to leverage risk through short sale trades.

Counterparty Credit Risk: Counterparty risk is a type of credit risk and is the risk of default by the counterparty associated with trading derivative contracts. An example of counterparty credit risk is margin or collateral held with a prime broker. Our portfolio is exposed to counter party credit risk through net cash and securities pledged as collateral for short positions. Our prime broker is restricted from re-hypothecating or any form of re-pledging of securities forming any part of our collateral.

Volatility Risk: Volatility refers to uncertainty and risk related to size of change of an instrument or portfolio. It is a statistical measure of the dispersion of returns for a given security or market index. Volatility is proportional to the directional exposure of a portfolio and is measured by Value at risk (VaR) which is a statistical technique used to measure and quantify the level of volatility.

Concentration and Sector Risk: Applies when a fund has a large proportion of total assets invested in specific assets, sectors or regions. Concentrated positions or concentrated sectors in a fund will impact the returns of the fund more so than diversified funds.

Correlation Risk: A measure that determines how assets move in relation to each other. Correlation risk arises when the correlation between asset-classes change. Correlation risk also arises when the correlation within an asset-class changes. Examples of correlation within asset classes include equity pairs trading, fixed income curve trading and commodities pairs trading. Our portfolio does not make use of any of the aforementioned trading strategies.

Equity Risk: Applies to investment in shares or derivatives based on shares. The market price of shares varies depending on supply and demand of the shares. Equity risk is the risk of loss due to the drop in the market price of shares. Equity risk can either be systematic risk which is risk to the entire market based on political and economic indicators or unsystematic risk which is company specific and includes risk relating to company profits, future prospects and general consensus on the company or sector.

Liquidity risk: Liquidity risk consists of trading liquidity risk and funding liquidity risk. Trading liquidity risk is the risk that you cannot sell an asset within a reasonable amount of time at a fair price. Funding liquidity risk refers to the inability to service redemption requests according to the redemption terms of a fund.

Net Asset Value (NAV): is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees.

Annualised Return: is the weighted average compound growth rate over the performance period measured.

Highest & Lowest Return: The highest and lowest rolling twelve-month performance of the portfolio since inception.

Total Expense Ratio (TER): reflects the percentage of the average NAV of the portfolio that was incurred as charges, levies and fees related to the management of the portfolio. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER cannot be regarded as an indication of future TER's. The TER is reported inclusive of performance fees, if applicable

Transaction Costs (TC): is the percentage of the average NAV of the portfolio incurred as costs relating to the buying and selling of the portfolio's underlying assets. Transaction costs are a necessary cost in administering the portfolio and impacts portfolio returns.

Total Investment Charges (TIC): is the percentage of the average NAV of the portfolio incurred as costs relating to the investment in the portfolio. It should be noted that TIC is the sum of two calculated ratios (TER+TC). TIC should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund and investment decisions of the investment manager.

Risk-reward profile: is based on historical data and may not be a reliable indication of the future risk profile of the portfolio. The risk category shown is not guaranteed and may change over time. The lowest category does not mean the investment is risk free. There may be other special areas of risk relating to the investment including: market risk, liquidity risk and risks associated with the short selling of securities. Equity investments are volatile by nature and subject to potential capital loss. The manager and the investment manager do not render financial advice. Our risk indicator does not imply that the portfolio is suitable for all types of investors. You are advised to consult your financial adviser to determine the appropriateness of the product for your portfolio.

Information and mandatory disclosures

Collective Investment Schemes are generally medium to long-term investments. The value of participatory interests (units) may go up as well as down. Past performance is not necessarily a guide to future performance. Collective investments are traded at ruling prices and can engage in scrip lending and borrowing. A schedule of fees, charges and maximum commissions is available on request from Sanne Management Company (RF) (Pty) Ltd ("the manager"), as well as a detailed description of how performance fees are calculated and applied. The manager does not provide any guarantee in respect to the capital or the return of the portfolio. Excessive withdrawals from the fund may place the fund under liquidity pressure and in such circumstances a process of ring-fencing of withdrawal instructions and managed pay-outs over time may be followed. Commission and incentives may be paid, and if so, are included in the overall costs. Portfolios may be closed to new investors in order to manage it more efficiently. Prices are published monthly on the manager's website and in local media. Additional information, including Key Investor Information Documents, Minimum Disclosure Documents, as well as other information relating to the portfolio is available, free of charge, on request from the manager. The manager retains full legal responsibility for any third-party-named portfolio.

Portfolio performance is calculated on a NAV to NAV basis with income reinvested. The performance for each period shown reflects the return for investors who have been fully invested for that period. Individual investor performance may differ as a result of initial fees, the actual investment date, the date of reinvestments and dividend withholding tax. Full performance calculations are available from the manager on request. Investors should note that the value of an investment is dependent on numerous factors which may include, but are not limited to, share price fluctuations, interest and exchange rates and other economic factors. Past performance is not indicative of future performance.

The Investment Manager ensures fair treatment of investors by not offering preferential fee or liquidity terms to any investor within the same strategy.
